Analysis

This card sort has taught me that my initial idea of the navigation of the app is not as intuitive as I thought.

- Most participants grouped all the clue cards together. They were not grouped in my initial sitemap. There should be a section where users can create and edit clues separate from hunts. We can also add a 'clue bank'. A user will be able to select from already created clues when creating a new hunt.
- Many participants placed the 'Invite Friends' card in the 'Settings' or 'Profile' category. Adding an option to invite friends in that section is a good idea.

Revised Sitemap
